1 Introduction

Purpose

The purpose of the virtual tour of the Majuli river island project is to provide an immersive, multimedia-rich experience that showcases the ecological, cultural, and architectural heritage of the island. The virtual tour aims to give users an overview of the location, its geography, ecology, and daily life, as well as a comprehensive experience of the Auniati temple premise, including daily rituals and special events. By providing a virtual experience, the project also aims to make the island accessible to a wider audience, including those who may not be able to visit in person.

The target audience for the project is a diverse group of people interested in exploring the cultural and architectural heritage of the Majuli river island. This may include tourists, students, researchers, cultural enthusiasts, and individuals interested in learning more about the unique features and significance of the island. The project will also be accessible to a wider audience, including those who may not be able to visit in person, by providing a virtual experience.

Document Conventions

Project Scope

Creation of a comprehensive and interactive multimedia-rich experience. The virtual tour will be comprised of four major components, including a multimedia-rich introduction to the river island, an audio-visual tour of the Auniati temple premise, and interactive navigation features. The virtual tour will allow the user to experience daily rituals and special events at the temple and gain a comprehensive understanding of the location and its surroundings. The project will be compatible with various input devices, such as keyboards and joysticks, and the software will support various file formats for audio, video, and images. The project will also be compatible with various operating systems and have the ability to exchange data through APIs. The project will be designed to run on devices with high performance, adequate storage space, and compatible screen resolution to fully experience the virtual tour.

2 Overall Description

Product Perspective

"IICT WEBSITE" is the replacement of the manual hard copy result process. The data have been stored in the hard file or papers, this website will store all of those in the website. Main goal of this project is to minimize the work and maximize the result of this result processing system.

User Classes and Characteristics

"IICT WEBSITE" has basically 4 types of users.

- Teachers
 - Director
 - Course Teacher
- Students
- Official Staff

Teacher has 2 types - Director defines the course teachers who will take the courses. Student fulfill all the requirements like- fees, informations can take advantages of the website.

Product Functions

"IICT WEBSITE" store all the results of the students of program PGD, MIT. Also others programs can be included if necessary. Before using the main function of the

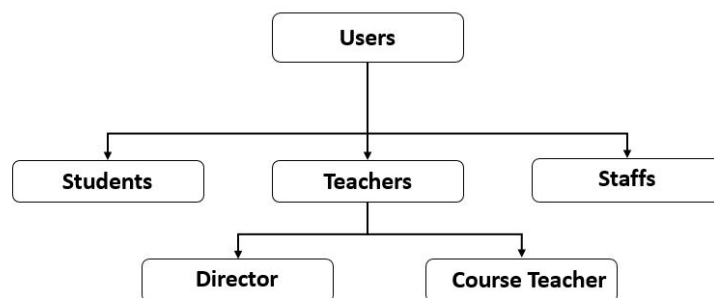

Figure 2.1: type of users

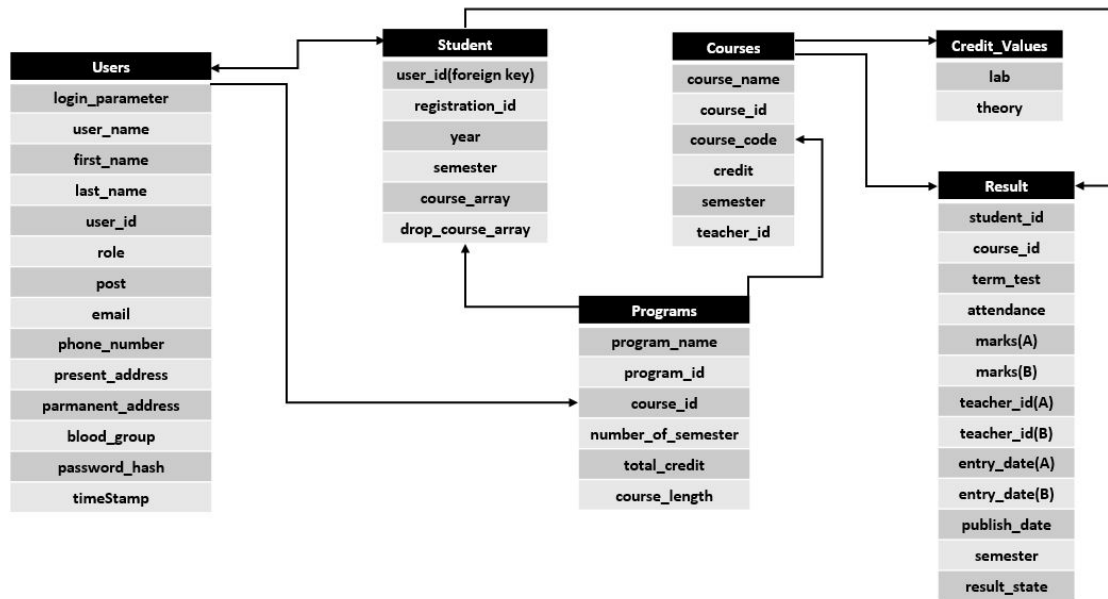

Figure 2.2: Data Flow Diagram

software result process, users have to be registered.

All users have - login_parameter, user_name, first_name, last_name, user_id, role, post, email, phone_number, present_address, parmanent_address, blood_group, password_hash and timeStamp.

Students have some extra informations after complete his/her registration , such as - user_id(foreign key), registration_id, year, semester, course_array and drop_course_array. These are the information that contains his/her result of his taken courses and program. Each programs has some data - program_name, program_id, course_id, nunnumber_of_semester, total_credit and course_length. There will be onew or many course_id in each programs.

Courses table contains - course_name, course_id, course_code, credit, semester and teacher_id.

Every course has its own Credit Values. Those have been 2 types - lab, theory.

Result is the main feature of all. It contains the values of all the exams of a particular student. It has data field - student_id, course_id, term_test, attendance, marks(A), marks(B), teacher_id(A), teacher_id(B), entry_date(A), entry_date(B), publish_date, semester and result_state.

Operating Environment

The website will be operate in any Operating Environment - Mac, Windows, Linux etc.

Design

Student activities have 3 steps -

- From Fill Up Process
- Courses Payment
- Student Profile

Top selected Student first fill his/her form, bank payment. After verification, student pays for their selected courses. Then he can enter his profile.

Every student profile contains his/her personal information, results, taken courses, dropped courses and notice.

Notice will contain all the news of IICT.

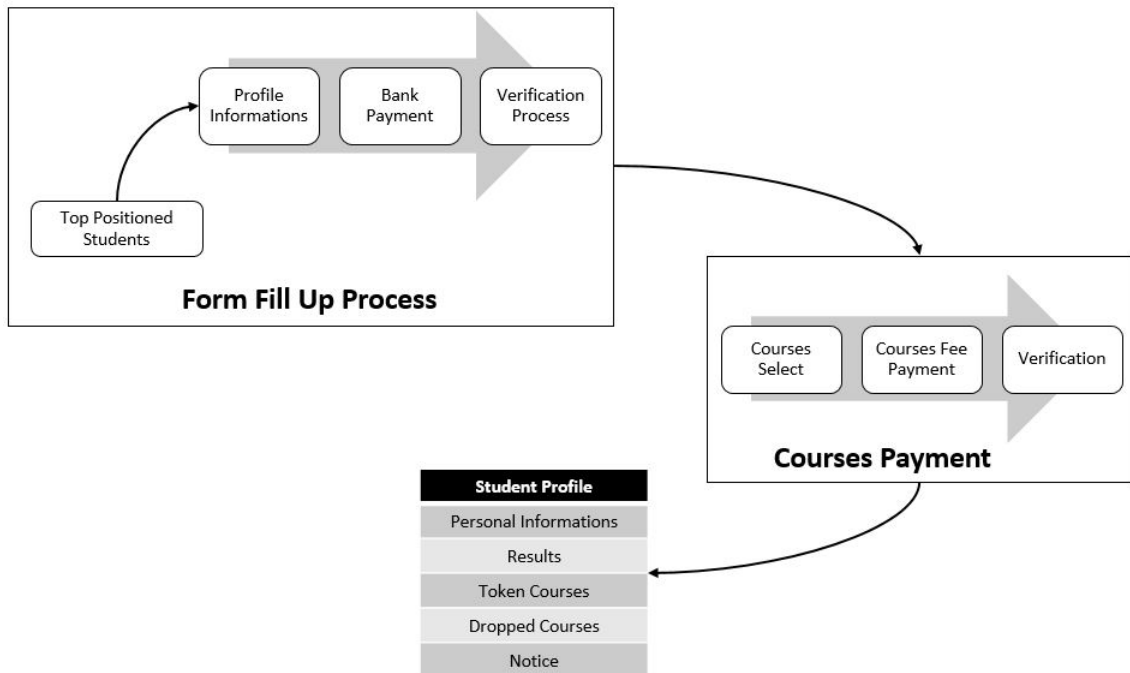

Figure 2.3: Student Activities

Teacher activities have 2 steps -

- Director
- Course Teacher

Director can re-view the result, publish result, give notice and also create teacher. He can also perform course teacher activities.

Teacher creates results, view students and create notice.

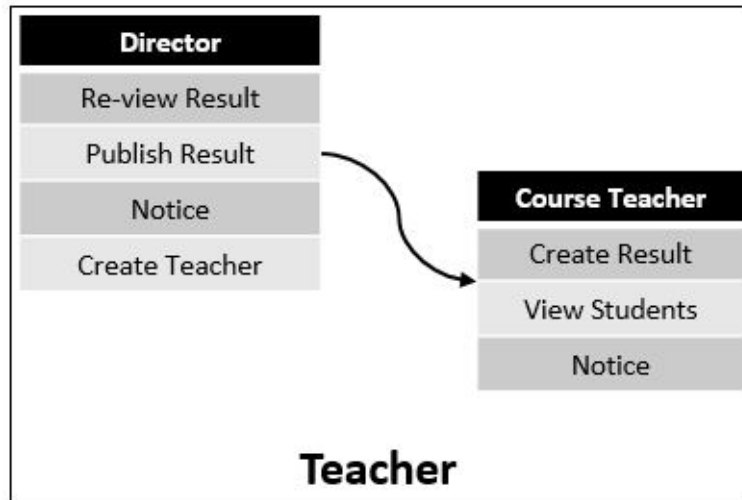

Figure 2.4: Teacher Activities

Staff has only one activity -

- Notice

Figure 2.5: Staff Activities

3 External Interface requirements

User interfaces

Hardware interfaces

In order to fully experience the virtual tour of the Majuli river island, it is important to ensure that the devices used have the necessary hardware components. These components include speakers and input devices such as a keyboard or joystick. Additionally, it is recommended that the devices have a minimum screen resolution in order to enhance the overall experience of the tour.

It is also crucial that the devices have high performance capabilities, ample storage space, and operating system compatibility in order to effectively run the software.

Software interfaces

The operating system on the device used to run the software must also be compatible with the virtual tour software and also the connection between the input devices and the virtual tour software could be established through various means, such as Wi-Fi, Bluetooth, or wired connections. The design team will determine the most appropriate connection method based on the specific requirements of the project.

It is important to specify the file formats that the virtual tour software must be able to read and write, such as image, audio, or video formats. Furthermore, Better API requirements for data exchange, data retrieval, or data visualization.

4 Functional Requirements Hierarchy

5 Functional Requirements

Start Virtual Tour

- **Input** : Input key(s)
- **Output** : Visual Effects / Island Virtual Tour Start Screen
- **DESC** : Displays the visual effects or skips it based on the input keys

Start Intro

- **Input** : Input key(s)
- **Output** : Visual Effects and Geographical Description
- **DESC** : Displays visual effects such as globe rotation and gives a multimedial description (video/audio/image) on the location, geography, ecology, important places and daily life on the river island

Skip Intro

- **Input** : Input key(s)
- **Output** : Island Virtual Tour start screen
- **DESC** : Skips the introduction video and displays the start screen of Majuli Island virtual tour

Start Island Virtual Tour

- **Input** : Location Landmark (Kamalabari temple / Auniati temple / Jangraimukh tribal village)
- **Output** : VR Tour
- **DESC** : Starts the island's virtual tour based on the input location landmark

Navigation

- **Input** : Location / Input key
- **Output** : 3D-view

Locomotion

- **Input** : Input key
- **Output** : 3D-view
- **DESC** : 3D-view based on stepwise movement (right/left/front/back) of the user

Teleportation

- **Input** : Location
- **Output** : 3D-view of teleported location

Location Awareness

- **Input** : Location Landmark / Location
- **Output** : Mini Map

Create Mini Map

- **Input** : Location Landmark
- **Output** : Mini Map
- **DESC** : Creates a mini map based on the chosen landmark

Update Mini Map

- **Input** : Location
- **Output** : Mini Map
- **DESC** : Updates the mini map based on real-time tracking of user's location

Location Differentiator

- **Input** : Location
- **Output** : Location Importance
- **DESC** : Decides whether a location is IMP or UNIMP

6 Other Non-Functional Requirement

Performance Requirement

1. Fast load time for all multimedia elements
2. Real-time navigation with minimal lag
3. Responsive design for different screen sizes

Security Requirements

1. Data protection for user information
2. Secure storage and transfer of multimedia elements
